

Submission Worksheet

Submission Data

Course: IT202-450-M2025

Assignment: IT202 Module 3 HTML, CSS, JS Challenges

Student: Nicholas P. (nmp33)

Status: Submitted | **Worksheet Progress:** 100%

Potential Grade: 10.00/10.00 (100.00%)

Received Grade: 0.00/10.00 (0.00%)

Started: 6/16/2025 11:06:17 PM

Updated: 6/16/2025 11:52:22 PM

Instructions

- Overview Link: <https://youtu.be/Dyl6dg1Xybo>
- 1. Ensure you read all instructions and objectives before starting.
- 2. Create a new branch from dev called M3-Homework
 - 1. `git checkout dev` (ensure proper starting branch)
 - 2. `git pull origin dev` (ensure history is up to date)
 - 3. `git checkout -b M3-Homework` (create and switch to branch)
- 3. Copy the template code from here: [GitHub Repository - M3 Homework](#)
 - It includes Challenges 1-3, `util.js`, and `styles.css`. Put all into an M3 folder or similar inside your `public_html`
 - Immediately record to history
 - `git add public_html`
 - `git commit -m "adding M3 HW baseline files"`
 - `git push origin M3-Homework`
 - Create a Pull Request from M3-Homework to dev and keep it open
- 4. Fill out the below worksheet
 - Each Problem requires the following as you work
 - Ensure there's a comment with your UCID, date, and brief summary of how the problem was solved
 - Update `ucid` in header tag
 - Code solution (add/commit periodically as needed) (style and/or script tags)
- 5. Once finished, click "Submit and Export"
- 6. Locally add the generated PDF to a folder of your choosing inside your repository folder and move it to Github
 - 1. `git add .`
 - 2. `git commit -m "adding PDF"`
 - 3. `git push origin M3-Homework`
 - 4. On Github merge the pull request from M3-Homework to dev
 - 5. On Github create a pull request from dev to prod and immediately merge. (This will trigger the prod

deploy to make the heroku prod links work)

7. Upload the same PDF to Canvas

8. Sync Local

1. git checkout dev
2. git pull origin dev

Section #1: (3 pts.) Challenge 1 - Fixed Header, Content, Footer

Progress: 100%

☰ Task #1 (3 pts.) - Edit the `style` and `script` tags to solve the challenge requirements

Progress: 100%

Details:

- Only make edits where noted via provided comments
- Update your ucid in the header tag
- #1 The header and footer should remain FIXED in place (top and bottom of page respectively)
- #2 The content area should SCROLL independently (nothing should be pushed off screen and the browser WINDOW scrollbar shouldn't appear)
- #3 The entire page should always take up the full viewport height
- #4 The borders around header,main,footer should remain intact and visible, this will help show that the challenges were solved correctly
- Add code to solve the problem (add/commit as needed)

📁 Part 1:

Progress: 100%

Details:

Two screenshots are expected

1. Snippet of relevant code showing solution (with ucid/date comment)
2. Full output of executing the program (visit the proper file on Heroku dev after a manual deploy) 1. Ensure url is visible in the browser's address bar

```
HTML <body> {
  width: 100%;
  margin: 0;
  padding: 0;
  overflow: hidden;
}

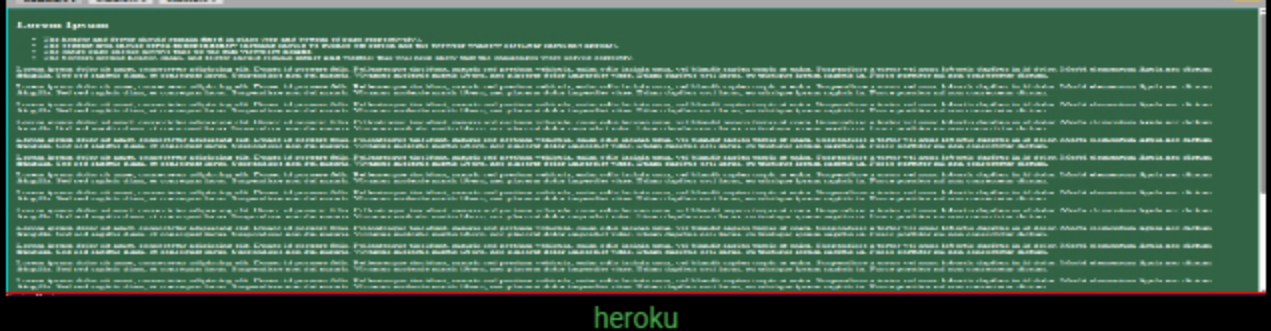

body > challenges {
  display: flex;
  flex-direction: column;
}

header {
  margin-top: 10px;
  top: 0;
  left: 0;
  right: 0;
  height: 40px;
  border-bottom: 1px solid #ccc;
}

nav {
  margin-top: 10px;
  height: 30px;
  border-bottom: 1px solid #ccc;
}

footer {
  position: fixed;
  bottom: 0;
}
```

Part 3:

Progress: 100%

Details:

Briefly explain how the code solves the challenge(s) (note: this isn't the same as what the code does)

Your Response:

The header and footer position are locked and then the body is set to only the height in between so that it scrolls in between the two without ever going off the page.

Section #2: (3 pts.) Challenge 2 - Header, Content, And Sidebars

Progress: 100%

≡ Task #1 (3 pts.) - Edit the `style` and `script` tags to solve the challenge requirements

Progress: 100%

Details:

- Only make edits where noted via provided comments
- Update your ucid in the header tag
- Using CSS, adjust the layout per the following
 - #1: Header is at the top
 - #2: Content takes up the rest of the height
 - #3: Both sidebars docked to the respective side and take up 15% width; Content area should utilize the remaining width
- Using JavaScript complete the following
 - #4: Attach the appropriate event listener to the buttons
 - #5: Individual toggle the respective panel between collapsed and uncollapsed (Don't lose the button in the process)
 - #6: The content should adjust based on the status of the respective sidebars (i.e., take up more left, right, or both space)
- Add code to solve the problem (add/commit as needed)

Part 1:

Progress: 100%

Details:

Two screenshots are expected

1. Snippet of relevant code showing solution (with ucid/date comment)
2. Full output of executing the program (visit the proper file on Heroku dev after a manual deploy) 1. Ensure url is visible in the browser's address bar

```
script>
/* Solve the button logic here by finding and attaching an appropriate event listener and logic*/
document.querySelectorAll('aside button').forEach(button => {
  button.addEventListener('click', () => {
    const sidebar = button.parentElement;
    sidebar.classList.toggle('collapsed');
  });
});

//script>

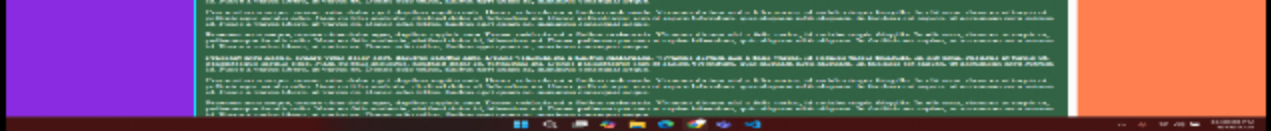

<style>
/* You're free to make whatever edits you need here, just don't override anything in the styles.css of
html, body {
  height: 100%;
  margin: 0;
  padding: 0;
  overflow: hidden;
}

body > challenge? {
  display: flex;
  flex-direction: column;
  height: 100%;
}

header {
  flex-shrink: 0;
  display: flex;
  align-items: center;
  padding: 0 10px;
}
```

Part 3:

Progress: 100%

Details:

Briefly explain how the code solves the challenge(s) (note: this isn't the same as what the code does)

Your Response:

For this one I used event listeners to wait for the click on the sidebars. I then made the CSS react based on the state recorded by the click.

Section #3: (3 pts.) Challenge 3 - Carousel Layout With Swiping

Progress: 50%

Task #1 (3 pts.) - Edit the `style` and `script` tags to solve the challenge requirements

Details:

- Only make edits where noted via provided comments
- Update your ucid in the header tag
- Using CSS, adjust the layout per the following
 - #1 Header should be at the top
 - #2 Carousel should take up full width
 - #3 Buttons should be centered
 - #4 Carousel panels should fill the full height of the carousel
 - #5 Carousel content should be centered (vertical and horizontal)
- Using JavaScript complete the following
 - #4 Attach appropriate event listeners to each button
 - #5 Cycle through each panel, showing only 1 at a time
 - #6 Ensure that the panels loop when reaching the last or first one
- Add code to solve the problem (add/commit as needed)

Part 1:

Progress: 100%

Details:

Two screenshots are expected

1. Snippet of relevant code showing solution (with ucid/date comment)
2. Full output of executing the program (visit the proper file on Heroku dev after a manual deploy) 1. Ensure url is visible in the browser's address bar

```

// Attach the button click here by finding and attaching an appropriate event listener and logic
const carousel = document.querySelector("#carousel-container");
const prev = document.querySelector("#prev");
const next = document.querySelector("#next");
let carouselIndex = 0;

function updateCarousel() {
  const currentIndex = carouselIndex % carousel.length;
  const nextIndex = (currentIndex + 1) % carousel.length;
  const prevIndex = (currentIndex - 1 + carousel.length) % carousel.length;

  carousel.querySelector(`div:nth-child(${nextIndex})`).style.display = "block";
  carousel.querySelector(`div:nth-child(${prevIndex})`).style.display = "block";
  carousel.querySelector(`div:nth-child(${currentIndex})`).style.display = "none";

  carouselIndex = nextIndex;
}

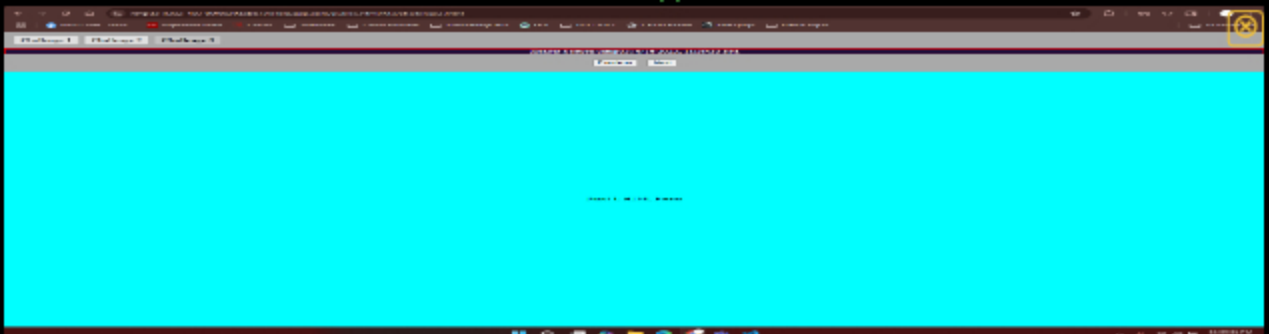

// Attach the button click here by finding and attaching an appropriate event listener and logic
prev.addEventListener("click", updateCarousel);
next.addEventListener("click", updateCarousel);

// Attach the button click here by finding and attaching an appropriate event listener and logic
const prev = document.querySelector("#prev");
const next = document.querySelector("#next");
const carousel = document.querySelector("#carousel-container");
const carouselIndex = 0;

prev.addEventListener("click", updateCarousel);
next.addEventListener("click", updateCarousel);

Part 3:

Progress: 100%

Details:

Briefly explain how the code solves the challenge(s) (note: this isn't the same as what the code does)

Your Response:

The code uses event listeners to track which button is clicked and then makes the carousel update accordingly. The CSS makes it so that the carousel responds to the clicks and slides smoothly.

Saved: 6/16/2025 11:42:49 PM

Task #2 (+ 1.01 pts.) - Extra Credit - Challenge 7

Progress: 0%

Details:

- Allow mouse swipe on the carousel to cycle through the panels, similar to how the buttons would work

Part 1:

Progress: 0%

Details:

1. Snippet of relevant code showing solution (with uuid/date comment)

A futuristic, glowing blue circuit board with a central circular area containing the text "MISSING IMAGE". The circuitry is intricate, with various components and lines visible. The central area is a dark circle with the text in white, surrounded by concentric rings of light blue and white. The overall aesthetic is high-tech and digital.

Task #2 (0.33 pts.) - WakaTime - Activity

Progress: 100%

Details:

- Visit the WakaTime.com Dashboard
- Click Projects and find your repository
- Capture the overall time at the top that includes the repository name
- Capture the individual time at the bottom that includes the file time
- Note: The duration isn't relevant for the grade and the visual graphs aren't necessary

Saved: 6/16/2025 11:48:17 PM

Task #3 (0.33 pts.) - Reflection

⇒ Task #1 (0.33 pts.) - What did you learn?

Progress: 100%

Details:

Briefly answer the question (at least a few decent sentences)

Your Response:

I learned how to use event listeners properly. This helped me to learn how to make reactive CSS that looks nice when moving like from the carousel problem.

Saved: 6/16/2025 11:49:57 PM

⇒ Task #2 (0.33 pts.) - What was the easiest part of the assignment?

Progress: 100%

Details:

Briefly answer the question (at least a few decent sentences)

Your Response:

The easiest part for me was the second challenge working with the side bars. The event listeners and styling for this one were pretty straightforward.

Saved: 6/16/2025 11:50:32 PM

⇒ Task #3 (0.33 pts.) - What was the hardest part of the assignment?

Progress: 100%

Details:

Briefly answer the question (at least a few decent sentences)

Your Response:

The hardest part for me was problem one. I could not get the header to stay in the right place while the navbar also stayed in view. It was giving me a problem so I ended with the header above the navbar.
