

Submission Worksheet

Submission Data

Course: IT202-450-M2025

Assignment: IT202 PHP Multi-Dimension Problems

Student: Nicholas P. (nmp33)

Status: Submitted | **Worksheet Progress:** 100%

Potential Grade: 1000.00/1000.00 (100.00%)

Received Grade: 0.00/1000.00 (0.00%)

Started: 7/14/2025 6:54:05 PM

Updated: 7/14/2025 7:36:41 PM

Instructions

- Overview Link: <https://youtu.be/jd5giyXReal>
- 1. Ensure you read all instructions and objectives before starting.
- 2. Create a new branch from dev called M6-Homework
 - 1. `git checkout dev` (ensure proper starting branch)
 - 2. `git pull origin dev` (ensure history is up to date)
 - 3. `git checkout -b M6-Homework` (create and switch to branch)
- 3. Copy the template code from here: [GitHub Repository - M6 Homework](#)
 - It includes Problems 1-3 and `base.php`. Put all into an M6 folder or similar inside your `public_html`
 - Immediately record to history
 - `git add public_html`
 - `git commit -m "adding M6 HW baseline files"`
 - `git push origin M6-Homework`
 - Create a Pull Request from M6-Homework to dev and keep it open
- 4. Fill out the below worksheet
 - Each Problem requires the following as you work
 - Ensure there's a comment with your UCID, date, and brief summary of how the problem was solved
 - Initial outline/plan of how you'll solve it via comments (add/commit after this stage)
 - Code solution (add/commit periodically as needed)
- 5. Once finished, click "Submit and Export"
- 6. Locally add the generated PDF to a folder of your choosing inside your repository folder and move it to Github
 - 1. `git add .`
 - 2. `git commit -m "adding PDF"`
 - 3. `git push origin M6-Homework`
 - 4. On Github merge the pull request from M6-Homework to dev
 - 5. On Github create a pull request from dev to prod and immediately merge. (This will trigger the prod deploy to make the heroku prod links work)

Heroku Deploy

Saved: 7/14/2025 6:59:58 PM

Part 2:

Progress: 100%

Details:

- Direct link to the file in the homework related branch from Github (should end in `.php`)
- Direct link to the file on Heroku Prod (Just grab the base prod url and manually enter the path to the file)

Part 3:

Progress: 100%

Details:

Briefly explain **how** the code solves the challenge (note: this isn't the same as **what** the code does)

Your Response:

The code uses a foreach to iterate over each bird in birds. Arrays are then constructed and added into subset using the name, color, and region as keys and values.

Section #2: (250 pts.) Problem 2 - Adding Properties

Progress: 100%

Task #1 (250 pts.) - Edit the `processCars` function to add properties

Details:

- Only make edits where noted via provided comments
- Challenge 1: Add a new property called age that's set from today's year and the car's year
- Challenge 2: Add a new property called isClassic that's true/false based on \$classic_age
- Step 1: sketch out plan using comments (include ucid and date)
- Step 2: Add/commit your outline of comments (required for full credit)
- Step 3: Add code to solve the problem (add/commit as needed)

 Part 1:

Progress: 100%

Details:

Two screenshots are expected

1. Snippet of relevant code showing solution (with ucid/date comment)
2. Full output of executing the program (visit the proper file on Heroku dev after a manual deploy)

```
// Start edits
// rm: 7/14
// PLAN: change current year using date("Y"), then iterate over the array same as last problem. Add logic to determine age, curr year - year, and is classic with (age >= classic)
$currentYear = date("Y");

foreach ($cars as $car) {
    $age = $currentYear - $car["year"];
    $car["age"] = $currentYear - $car["year"];
    $car["isClassic"] = ($age >= $classic_age);
    $processedCars[] = $car;
}
// End edits
```

⇒ Part 3:

Progress: 100%

Details:

Briefly explain **how** the code solves the challenges (note: this isn't the same as **what** the code does)

Your Response:

Uses foreach like the last problem to iterate over car in cars. Then added date("Y") to determine current year and logic for age, current year - year to find age. Age was compared to classic age to determine isClassic.

Saved: 7/14/2025 7:10:32 PM

Section #3: (250 pts.) Problem 3 - Join

Progress: 100%

≡ Task #1 (250 pts.) - Edit the `joinArrays` function to combine two arrays based on a common key

Progress: 100%

Details:

- Only make edits where noted via provided comments
- Challenge: Combine the data in both arrays by the `userId` property
- Step 1: sketch out plan using comments (include `ucid` and `date`)
- Step 2: Add/commit your outline of comments (required for full credit)
- Step 3: Add code to solve the problem (add/commit as needed)

Part 1:

Progress: 100%

Details:

Two screenshots are expected

1. Snippet of relevant code showing solution (with ucid/date comment)
2. Full output of executing the program (visit the proper file on Heroku dev after a manual deploy)

```
// Start edits
//nmp33 7/14
//PLAN: Using userid as the key I will build an array containing the activities with userid as the key
//Iterate over each user using foreach and then lookup the users ID in the activity map. Merge the activity into the rest of the user info

$activityMap = [];
foreach ($activities as $activity) {
    $activityMap[$activity["userId"]] = $activity["activity"];
}

foreach ($users as $user) {
    $userId = $user["userId"];
    $user["activity"] = $activityMap[$userId];
    $joined[] = $user;
}
<- END-NO foreach ($users as $user)

// End edits
```

Saved: 7/14/2025 7:30:16 PM

⇒ Part 3:

Progress: 100%

Details:

Briefly explain **how** the code solves the challenges (note: this isn't the same as **what** the code does)

Your Response:

First I built an array that uses the userId as a key to the user activity. Then I used a foreach to loop over each of the users and then used the array I built to lookup and add the users activity to the rest of their info. Then added the users to joined.

Section #4: (250 pts.) Misc

Progress: 100%

≡ Task #1 (83.33 pts.) - Github Details

Progress: 100%

📁 Part 1:

Progress: 100%

Details:

From the Commits tab of the Pull Request screenshot the commit history Following minimum should be present

Commits

Saved: 7/14/2025 7:31:37 PM

≡ Task #3 (83.33 pts.) - Reflection

Progress: 100%

⇒ Task #1 (0.33 pts.) - What did you learn?

Progress: 100%

Details:

Briefly answer the question (at least a few decent sentences)

Your Response:

I learned that constructing maps in order to join arrays on certain attributes can be very useful. Sometimes data will not be formatted in the most efficient manner and so knowing how to construct my own datasets is an important skill.

 Saved: 7/14/2025 7:34:52 PM

⇒ Task #2 (0.33 pts.) - What was the easiest part of the assignment?

Progress: 100%

Details:

Briefly answer the question (at least a few decent sentences)

Your Response:

The easiest part of the assignment was problem 1. All i had to do was use a for each to iterate over each bird and then extract the fiels into a new array subset.

 Saved: 7/14/2025 7:35:47 PM

⇒ Task #3 (0.33 pts.) - What was the hardest part of the assignment?

Progress: 100%

Details:

Briefly answer the question (at least a few decent sentences)

Your Response:

The hardest part of the assignment was problem 3. I did not think at first to use another array first to have userId as a key to activities. After I thought of that, the assignment became easy.
